

ATTENTION:

Before proceeding we suggest you to download, with the DigiRaceMMX software, the existing sessions you would like to keep, as the Upgrade may reset the system.

Your Stealth GPS LITE shows the following splash screen:

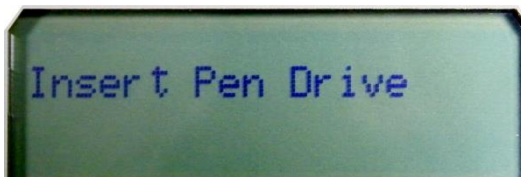

and the "System Info" displays STEALTH_GPS LITE as name:

1. Power on your Stealth and enter the "System Upgrade" menu.

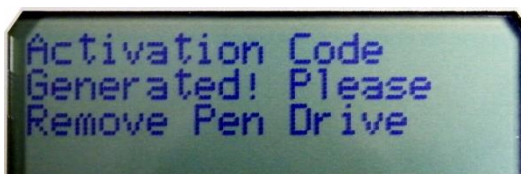

2. At the following screen insert the USB pendrive.

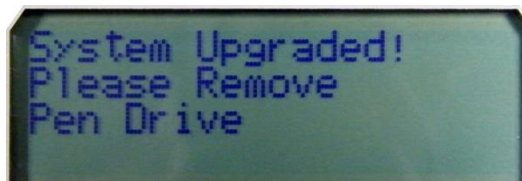

3. The system will automatically generate an activation file with extension .SAF (eg:12341234.SAF) on the pendrive, which name is related to the device serial number.

Such an operation is confirmed by the following screen:

4. Remove the USB pendrive and insert it into the PC socket.

5. Access the Stealth Upgrade webpage: www.starlane.com/stealthupgrade
6. Select the activation file .SAF in the pendrive and press SEND.
7. Fill-in the invoicing information and proceed to the Paypal form.
8. Once the payment is complete you'll can download the license file with extension .SLF that you'll save on your pendrive.
9. Power on your Stealth and insert the USB pendrive, the system will automatically load the license file and will proceed with the upgrade.

When completed the memory will be automatically formatted in order to allow the correct data management.

10. If you upgraded to the Full version, at the next reboot your Stealth will show the new splash screen:

and, in the "System info" menu, it will show the new name as LITE+.

Congratulations!

By this moment, on your Stealth GPS, the packages you purchased are active.
